RESTRICTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3 and 8-15, drawn to a system for image contour extraction that applies input and reduce image data, main contour position correction and course contour position correction, classified in class 382, subclass 266.
 - II. Claims 4-7, drawn to a system for object extraction that applies the comparison of each portion of image data, and matching contour of shape data, classified in class 382, subclass 209.
 - III. Claims 16-17, drawn to a transmission system that comprises server and client, which mutually transmit and receive image data of object extraction, classified in class 382, subclass 305.
2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as input and reduce image data, main contour position correction and course contour position correction. Invention II has separate utility such as the comparison of each portion of image data, and matching contour of shape data. Invention III has separate utility such as server and client, which mutually transmit and receive image data of object extraction. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2623

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
